KITS

“AAEEC” & “AAEEC-NS”

Suggestions on using the components in the Leak Control Kit AAEEC and AAEEC-NS

CAUTION: This kit designed for use only by experienced and trained personnel only for temporary control until the container can be disposed of properly. Proper protective clothing must be worn.

IDENTIFY & KNOW THE CHEMICAL YOU ARE WORKING WITH AND ITS COMPATIBILITY WITH THE NEOPRENE, SBR RUBBER, AND STAINLESS & PLATED STEELS USED IN THESE PATCH KITS.

Note: The kits contain either the steel OR non-sparking tool pack and drift pin. Depends upon which kit was purchased.

INSTRUCTIONAL TRAINING VIDEO ON KITS NOW AVAILABLE

BALL PLUGS: Used where the surface is deeply concave. Insert toggle through hole, hold outside end of bolt, slide ball firmly against hole, and tighten wind nut until leak is at its most restricted flow.

TAPER SURFACE PLUGS: Used where surface is close to flat. Apply like Ball Plugs.

“T” PATCHES: For cracks and odd holes. Use like Ball Plug except use “T” bolt to straddle crack.

SCREW PATCHES: For pinholes. Screw it in till flow stops but don't strip out the hole trying to get it too tight.

HOT OR COLD HOSE TAPE: Pipes, hoses, small holes. Works best if surface is dry, but doesn't have to be.

BARRIER TAPE: Mark off an area to keep bystanders out.

FIX STIX EPOXY PUTTY: Instructions in pack.

Twin ‘T’ Patch set: Medium to large holes. Decide if you are going to use one or both ‘T’ bolts and what position they will be used. Assemble patch so it will fit the hole as on wing nut- washer – fender washer combo. After assembly, use like ‘T’ patch.

8” x 12” Hard Rubber Patch: Apply patch to vessel with support ladder in place, wrap straps around vessel and position over patch and ladder, then tighten.

9” x 9” Neoprene & 12” x 30” Closed Cell Foam: For extra help where you may need it.

Wood Wedge & Felt Kit: Lay felt centered over hole, starting with bigger wedges, push as many as you can into the hole. Don't cut the felt with the wedges. The wood & felt should swell up as liquid hits it, so try to keep them dry beforehand.

LEAD WOOL: For hairline cracks. Use sharp tool (screwdriver, knife, etc.) to pack lead into crack. Start on one end, pack more and more in until it holds, then continue along crack little by little until you get it plugged. The harder you pack it the stronger it gets. If after many tries the lead won't stay in, the crack is too wide. Use a different item.
